

PUSHUP PRO

Product Requirements Document

AI-powered home bodyweight training app

Product	PushUp Pro
MVP Focus	Camera-counted push-ups only
Platform	Claude Code web app prototype
Core Promise	Count reps, track progress, compete with friends, and improve every day
Long-Term Vision	Full AI personal trainer for bodyweight training at home

***Vision:** PushUp Pro turns a phone camera into a supportive personal trainer that counts reps, tracks progress, sets goals, and keeps users accountable through streaks, badges, reminders, and challenges.*

1. Product Overview

PushUp Pro is a camera-powered AI fitness coach that helps users train at home by automatically counting push-ups, tracking progress, setting personalized goals, and keeping users motivated through streaks, badges, smart reminders, and competitive challenges.

The MVP focuses on push-up training because push-ups are simple, measurable, widely understood, and ideal for a first camera-counting prototype. The broader roadmap expands the product into a full AI personal trainer for bodyweight workouts.

Core Problem

People want to stay consistent with home workouts, but manual rep tracking is tedious, easy to forget, and not motivating. Pen-and-paper tracking works for a short time, then becomes annoying and inconsistent. PushUp Pro solves this by turning the user's phone into a simple AI-powered push-up coach.

Product Promise

PushUp Pro helps users answer one daily question: How many push-ups can I do today, and how can I get better tomorrow?

2. Target Users

- Beginners trying to build consistency.
- Intermediate users trying to increase push-up volume.
- Advanced users training for strength and endurance.
- Athletes who want competition, progress tracking, and accountability.

Fitness Levels

- Beginner
- Intermediate
- Advanced
- Athlete

3. MVP Scope

Included in MVP

- Push-up camera counting only.
- User onboarding and fitness level selection.
- Goal setting with AI-generated daily and weekly recommendations.
- Push-up variation library.
- Progress dashboard with total push-ups, today's reps, weekly total, average reps per set, streaks, and progress score.
- Weekly leaderboard and First to 500 Push-Ups This Week challenge.
- Streaks, badges, smart reminders, and supportive AI coach messaging.
- Manual rep entry backup if camera counting misses reps.
- Safety disclaimer and clear privacy expectations.

Excluded from MVP

- Full advanced form correction.
- Other camera-counted exercises.
- Native mobile app.
- Real payment system.
- Wearable integration.
- Real-time friend messaging.
- Medical, injury, or diagnosis-based recommendations.

4. User Journey

Onboarding Flow

The user completes a short onboarding flow that captures their training starting point and motivation.

- Name.
- Fitness level: Beginner, Intermediate, Advanced, or Athlete.
- Current max push-ups in one set.
- Main goal: build strength, improve consistency, hit 100 push-ups per day, compete with friends, or train like an athlete.
- Reminder preference.
- Whether the user wants AI-generated goals and competition features.

Example coach output after onboarding: Based on your starting point, your first goal is 60 push-ups this week. Let's build momentum.

Workout Flow

1. User taps Start Workout.
2. App opens camera and checks visibility.
3. App confirms lighting, framing, and readiness.
4. App gives a countdown: 3, 2, 1.
5. User performs push-ups.
6. App counts reps and displays supportive messages.
7. User ends workout.
8. App saves the workout and updates the dashboard, goals, badges, streaks, and progress score.

5. Core Features

Feature 1: Camera Push-Up Counter

The camera rep counter is the core MVP feature. The user props up their phone or laptop, starts a session, and the app counts push-ups using camera input.

Rep-Counting Rule

A rep counts when the user starts in the top push-up position, lowers their body toward the ground, reaches enough depth, and returns to the top position. For the MVP, the counter should be forgiving rather than overly strict.

Camera Setup Support

- Camera can see the user.
- Lighting is good enough.
- User is in frame.
- App is ready to count.

Example setup messages: Move back slightly. Great, I can see you. Lighting looks good. Ready to start counting. Try turning up your brightness or moving to better lighting.

Feature 2: Manual Rep Entry Backup

If camera counting fails, the user can manually edit or enter reps so progress is not lost. The post-workout summary should allow users to adjust final rep count, sets, variation, and notes.

Feature 3: AI Goal Setting

PushUp Pro recommends personalized daily and weekly goals based on past performance. Users can also manually set goals, and the AI coach helps them achieve those goals.

- Daily push-up goal.
- Weekly push-up goal.
- Streak goal.
- Challenge goal.
- Personal best goal.

Example: You completed 80 push-ups last week. This week, let's aim for 100. That's only about 15 push-ups per day.

Feature 4: Push-Up Variation Library

The app includes beginner, intermediate, advanced, and athlete push-up variations users can do at home.

Level	Variations
Beginner	Wall push-ups, incline push-ups, knee push-ups, standard push-up negatives
Intermediate	Standard push-ups, wide-grip push-ups, close-grip push-ups, tempo push-ups, pause push-ups
Advanced	Diamond push-ups, decline push-ups, archer push-ups, explosive push-ups, pike push-ups
Athlete	Plyometric push-ups, clap push-ups, one-arm progressions, deficit push-ups, weighted backpack push-ups

Each variation should include name, difficulty, short description, main muscles worked, suggested reps, and a safety note.

Feature 5: Progress Dashboard

- Total push-ups.
- Push-ups today.
- Weekly total.
- Average reps per set.
- Current streak.
- Best set.
- Progress score.
- Badges earned.

Feature 6: Progress Score

The progress score makes competition more fun than only comparing raw rep counts.

Formula: Progress Score = total weekly reps + streak bonus + personal best bonus + challenge completion bonus

- 1 push-up = 1 point.
- Daily streak bonus = 10 points per day.
- New personal best = 25 points.
- Completed daily challenge = 20 points.
- Completed weekly challenge = 100 points.

Example: 250 weekly push-ups + 5-day streak bonus + personal best bonus + 3 daily challenge bonuses = 385 points.

Feature 7: Badges

- First Workout
- 100 Total Push-Ups
- 500 Total Push-Ups
- 1,000 Total Push-Ups
- 3-Day Streak
- 7-Day Streak
- Personal Best
- Challenge Champion
- Morning Grinder
- Athlete Mode

Feature 8: Smart Reminders

PushUp Pro should use personalized reminders rather than generic notifications.

- Time to train. Let's get today's push-ups in.
- You're only 30 reps away from beating yesterday.
- Don't break the streak. Five minutes, push-ups done.
- You're 40 reps behind first place. Time to close the gap.
- Small work today still counts. Get one set in.

Feature 9: AI Coach Personality

The MVP coach should use a supportive trainer personality: encouraging, positive, motivating, clear, and not judgmental.

- Great work. You completed 42 push-ups today and kept your streak alive.
- No stress. Let's restart today with one strong set.
- That's a new personal best. You're getting stronger.
- First to 500 this week. Stay consistent and you'll be hard to beat.

Feature 10: Friend Competitions

Users can invite friends and compete through weekly challenges. The MVP challenge is First to 500 Push-Ups This Week.

Rank	User	Weekly Reps	Progress Score
1	Roy	420	525
2	Marcus	390	460
3	Jay	310	365

6. Future Premium Feature: AI Clone Competitor

A future premium feature could allow users to compete against an AI-generated rival called their AI Clone. This personalized competitor would push the user even when friends are not available or motivating.

- AI-generated rival name and personality.
- Simulated weekly rep goal and progress score.
- Rivalry-style motivational messages.
- Training pace based on the user's fitness level and consistency.
- Custom challenge generation and weekly AI performance review.

Example competitive message: I already hit 120 reps this week. You catching up?

Example supportive message: I got my workout in today. Let's both keep the streak alive.

This feature should be positioned as AI Accountability+ in a future premium package.

7. Monetization Strategy

Free Version

- Camera push-up counting.
- Manual tracking.
- Basic goals.
- Basic dashboard.
- Push-up variation library.
- Streaks and badges.
- Weekly leaderboard.

Future Premium Version

- Advanced AI form coaching.
- Full bodyweight exercise tracking.
- Custom workout plans.
- Voice coach.
- Advanced analytics.
- AI Clone competitor.
- Premium challenges.
- Personalized programs.
- Exportable progress reports.

Potential pricing: Free basic tracker, Premium at \$7.99/month or \$59.99/year, with possible student or athlete discounts.

8. Safety, Liability, and Privacy

PushUp Pro should clearly state that it provides general fitness guidance and progress tracking, not medical advice.

Safety disclaimer: PushUp Pro provides general fitness guidance and progress tracking. It is not medical advice. Users should stop exercising if they feel pain, dizziness, or discomfort and should consult a healthcare professional before beginning a new exercise program.

- Avoid injury diagnosis.
- Avoid medical claims.
- Encourage proper warmups.
- Encourage users to stop if they feel pain.
- Keep MVP feedback general.
- Do not overpromise form correction accuracy.
- Camera should only activate during workouts.
- Avoid storing video recordings unless explicitly needed and disclosed.

9. Required MVP Screens

Screen	Purpose / Key Content
Landing Page	App name, tagline, start button, and value proposition.
Onboarding Screen	Name, fitness level, current max push-ups, main goal, reminder preference.
Home Dashboard	Today's reps, weekly total, lifetime total, streak, progress score, start workout button.
Camera Workout Screen	Camera view, visibility status, countdown, live rep counter, end workout button, coach messages.
Workout Summary Screen	Total reps, sets, average reps, personal best notice, goal progress, save/edit option.
Goals Screen	Daily goal, weekly goal, AI recommendation, manual goal edit option.
Push-Up Library Screen	Beginner, intermediate, advanced, and athlete variations.
Challenges Screen	First to 500 challenge, leaderboard, invite friends button, challenge progress.
Badges Screen	Earned badges, locked badges, and badge descriptions.
Profile/Settings Screen	User name, fitness level, reminder settings, safety disclaimer, reset progress option.

10. User Stories

- **Camera counting:** As a user, I want the app to count my push-ups through the camera so I do not have to track reps manually.
- **Goal setting:** As a user, I want the AI to recommend goals based on my past performance so I can improve gradually.
- **Manual tracking:** As a user, I want to manually edit or add reps if the camera misses some so my progress remains accurate.
- **Progress tracking:** As a user, I want to see my daily, weekly, and total push-ups so I can understand my improvement.

- **Badges:** As a user, I want to earn badges so I feel rewarded for staying consistent.
- **Smart reminders:** As a user, I want personalized reminders so I feel motivated to complete my workouts.
- **Friend competition:** As a user, I want to compete with friends so I stay accountable and motivated.
- **AI Clone:** As a premium user, I want an AI-generated competitor so I always have someone pushing me to improve.

11. Functional Requirements

Account and Profile

- Create local profile.
- Select and update fitness level.
- Set and edit goals.
- View progress.

Workout Tracking

- Start camera workout.
- Display camera feed.
- Count push-up reps.
- Save completed reps.
- Manually edit reps.
- Calculate average reps per set.

Progress and Gamification

- Display total push-ups, today's push-ups, weekly total, average reps per set, current streak, progress score.
- Award badges.
- Track streaks.
- Calculate challenge progress.
- Display weekly leaderboard.

AI Coach

- Generate supportive messages.
- Recommend goals.
- Adjust goals based on past performance.
- Generate smart reminder copy.
- Provide weekly summaries in future versions.

12. Non-Functional Requirements

- **Usability:** The app must be simple enough to use immediately before a workout. Start Workout should be obvious and camera setup should be easy to understand.
- **Performance:** The camera screen should load quickly, the rep counter should update in real time or near real time, and dashboard stats should update immediately after saving a workout.
- **Accessibility:** Use large buttons, clear text, strong contrast, simple navigation, and friendly error messages.
- **Privacy:** Camera access must be transparent, limited to workout sessions, and video should not be stored in the MVP unless explicitly needed and disclosed.

13. Data Model

User

- userId

- name
- fitnessLevel
- currentMaxPushups
- mainGoal
- reminderPreference
- createdAt

Workout

- workoutId
- userId
- date
- totalReps
- sets
- averageReps
- variation
- usedCamera
- notes

Goal

- goalId
- userId
- type
- targetReps
- deadline
- aiGenerated
- completed

Badge

- badgeId
- name
- description
- requirement
- earned
- earnedDate

Challenge

- challengeId
- name
- target
- startDate
- endDate
- participants
- leaderboard

Progress Score

- userId
- weeklyReps
- streakBonus
- personalBestBonus
- challengeBonus
- totalScore

14. AI Requirements

For the prototype, AI behavior can be simulated with rule-based logic. The system should be designed so a real LLM or AI service can be connected later.

- If weekly reps increased, recommend a slightly higher weekly goal.
- If the user missed a day, suggest a manageable comeback target.
- If the user hits a personal best, celebrate it clearly.
- If the user is close to a challenge milestone, generate a motivational reminder.
- If the user is falling behind on the leaderboard, encourage action without shaming them.

15. Success Metrics

- User completes first workout.
- User completes at least three workouts in one week.
- Rep count can be saved successfully.
- Progress dashboard updates correctly.
- User can join and view the weekly challenge.
- User receives a useful goal recommendation.
- User earns at least one badge.
- User returns after receiving a reminder.

16. Product Roadmap

Version 1: MVP

- Camera-count push-ups.
- Dashboard.
- Goals.
- Push-up library.
- Streaks and badges.
- First to 500 challenge.
- Smart reminders.
- Supportive AI coach.

Version 2: Improved AI and Form Feedback

- Better pose detection.
- Depth feedback.
- Tempo feedback.
- Basic back alignment prompts.
- Voice coaching.

Version 3: Full Bodyweight Trainer

- Squats.
- Planks.
- Sit-ups.
- Lunges.
- Burpees.
- Mountain climbers.

Version 4: Premium AI Accountability

- AI Clone competitor.

- Personalized rival.
- Advanced challenge generation.
- Weekly AI performance review.
- Custom workout plans.

Version 5: Startup-Ready Product

- Native mobile app.
- Real friend invites.
- User accounts.
- Cloud database.
- Subscription system.
- Wearable integration.
- Social sharing.
- Trainer marketplace or athlete programs.

17. Claude Code Build Plan

9. Build static UI screens: landing, dashboard, workout, goals, library, challenges, badges, profile.
10. Add local data using state or local storage for profile, workouts, goals, badges, and progress score.
11. Build workout flow with start button, countdown, rep counter, end workout, and save workout.
12. Add browser camera access with preview and readiness status.
13. Add basic or simulated rep-counting logic, then upgrade later with pose detection.
14. Add gamification: streaks, badges, progress score, challenge progress, and leaderboard.
15. Add rule-based AI coach messages for goals, workout summaries, reminders, and challenge motivation.

18. Final MVP Summary

PushUp Pro MVP is a web app prototype that uses a camera-based workout flow to count push-ups, track progress, recommend goals, reward consistency, and let users compete in weekly push-up challenges.

Core features: camera push-up counting, progress dashboard, AI goals, push-up variation library, badges, streaks, smart reminders, leaderboard, and First to 500 challenge.

Future vision: a full AI bodyweight trainer with form coaching, voice feedback, premium workout plans, and an AI Clone competitor that keeps users accountable every day.
